-carotene

- The eye

The eye syndrome is prevented at night, and the resistance power to the darkness of the skin and the mucous membranes are increased.

- Recommended amount in Japan: 3ug

According to the United States recommends: 10ug, 5,000IU, 000IU as vitamin A.
At least it is necessary to take from the carotene.

Characteristic

The intake of -carotene changed into vitamin A is good

It is necessary

binoki tatamu

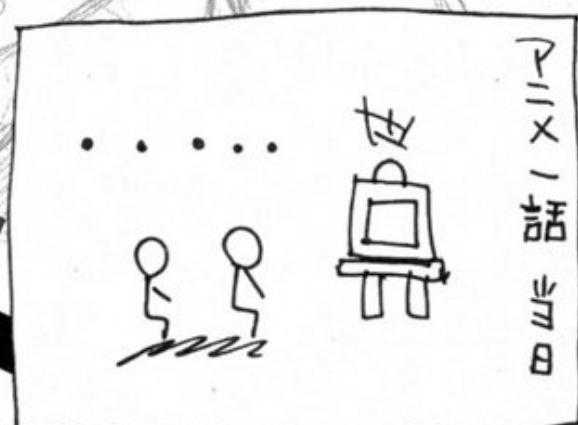

It recommends it to this:

The person who has people in the fault of the person to whom the person and eyes not seen easily are tired easily and in a person of smoking, etc., such as a person who
person who wants to do the aging prevention.

Recently, a tired person, the smoking person, asthma, and hay fever and other diseases, and the person who has
